We have to find the data sheet of the 2 components found on the previous step: DS2xyz (2x3 pins, TSOC SMD) and TEA (2 x 4 pins, SO8 SMD). DS2xyz is a one wire memory from Maxim Semi (). This is not the guy we need, it is a memory used by the laptop to identify the power supply (in case you wonder why the laptop is not working with an HP power supply with the same connector, same parameters etc). . At first the laptop didn't recognize the battery (did not power up the laptop) and I had to plug in the charging cable just for a minute to kickstart the battery. The laptop then started and AIDA reported 10% of the original capacity as “design capacity” and “full charge capacity”. For some reason the BQ chip modified the original static design capacity value. Weird.
